

«VIK-COMPOSITE» GmbH is happy to present

A new reinforced vacuum hose for high temperature and high pressure process

- Glass fiber reinforced silicone sleeve is resistant to cuts, cracks and abrasions during operation process which are the causes of vacuum leaks in the hose.
- Internal steel spring prevents the hose from collapsing under vacuum and pressure, and prevents hose separation from the couplings (fittings).
- The external support spring prevents hose lacerations at the fitting ends, extending the hose life.
- We will make for you hoses of any desired length from 0.5m to 25m.
- Maximum operating temperature is 260 ° C and operating pressure is 22 bar.

Hoses with a length of 2,3,4,5 m are available from stock. Hoses with a length from 0,5m to 25m are available on request. Production time is 1-2 weeks.
