

«VIK-COMPOSITE» GmbH Introduces World fastest Projection Laser

**From the pioneers of laser projection systems SL-LASER GmbH!
Forget everything you've seen so far!**

- Where others “flicker” - we stabilize the picture with incredible speed
- The **ProDirector 6+** with a new operating system makes work much easier
- Latest driver technology makes the laser projection system much faster and more accurate
- Moving of the laser images much more fluent and less flickering regarding other systems. Much more images projected at once without flickering

The points on the reference image (rectangle picture 3000mm to 1000mm at a vertical distance of 3000mm) were generated by a new laser at a rate of 75 Hz. The predecessor model of the laser produces the same image only at 38 Hz. Thus, the new **Laser ProDirector 6 +** produces the image almost 50% faster * than the previous model.

ProDirector 6+

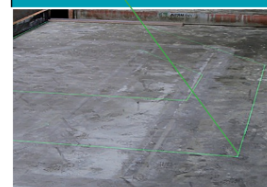

Upgrade options for ProDirector 5 and 6 and for the small unit ProDirector XS with the new features.

NEW PRODUCT

Convince yourself of this innovation and easily agree on one appointment with our sales staff.

VIK-COMPOSITE GmbH Team

*Attention! This statement only refers to the reference image under the same projection conditions!
Depending on the application, data, working environment and customer requirements, the speed could vary.
