

VIK-COMPOSITE GmbH Introduces new products

**VIK-COMPOSITE GmbH introduces
new 3-layers combined materials!**

<p align="center">COMBIVAC180-1 <i>3-layers combined product: polyamide peel ply, FEP release film and breather</i></p>	<p align="center">COMBIPEEL90-1 <i>3-layers combined product: knitted distribution mesh, release film and peel ply</i></p>
	
<p align="center">Description (use)</p>	
<p><i>It is a multilayer system made of polyamide peel ply, FEP release film and breather. This 3-products-combination has been created for the vacuum moulding technology. It facilitates the implementation of the bagging materials.</i></p>	<p><i>It is a multilayer system made of knitted distribution mesh, perforated release film permeable to resin, gases and peel ply which can be used in manufacturing processes for vacuum infusion of composite materials.</i></p>
<p align="center">Advantages</p>	
<ol style="list-style-type: none"> 1. Convenient when moulding is done against a vertical mould. 2. It allows to save time. 3. It improves the composites quality. 4. The product is easy to use and less expensive as you buy and apply one product instead of 3. 5. This easy-to-use product eliminates the risk of overlapping or omitted layer. 	<ol style="list-style-type: none"> 1. Compatible with most of polyester and epoxy resins. 2. It allows to save time. 3. The product is de-oiled and heat set: there is no risk of pollution. 4. The glue used to assemble the component is neutral: soluble with resins and does not affect the resin flow
