

Scissors for trimming edges and borders of impregnated laminated fabrics

Special, curved scissors made in Germany designed for trimming edges and borders of impregnated laminated fabrics made of carbon and glass fibers used in various processes of manufacturing parts of polymer composite materials. Scissors are available in two versions: a small size with curved blades and a large size with curved blades and curved handles. The curved shape of the scissors allows taking your hand away from the surface of the cut, thus protecting your fingers from injury against sharp edges and fibers.

The upper blade is micro-serrated, which prevents the blades sliding while cutting. Scissors are polished and chrome-plated to ensure protection from corrosion and solvents.

TECHNICAL DATA	VALUE
Material	forged carbon steel C60, hardness HRC 58,0 subject to grinding

REFERENCE	BLADES LENGTH	SCISSORS LENGTH	WEIGHT
SK3CUT11S16	55	160mm	60g
SK3CUT11S18	70	185mm	112g

NOTES

Please contact us for ordering scissors of different size.
