

Paddles are used to facilitate the laying up of prepreg, layers of reinforcing and auxiliary materials on the complex radius as well as for bonding of adhesive decorative film. It helps to smooth wrinkles and to remove air bubbles entrapped between the layers. The ergonomic shape and grip ridge for the finger in the middle of the paddle make its use easy and effective.

This product is used in various manufacturing processes of parts made of polymer composite materials.

TECHNICAL DATA	VALUE
Material type	High-density polyethylene
Color	White/Blue

THICKNESS	WIDTH	LENGTH
3mm	70mm	100mm
