

SK2PP230-4

High temperature nylon peel ply with release coating

SK2PP230-4 is a tight woven nylon peel ply with silicon coating. It provides good release property and is widely used in molding process of wind energy, marine, aerospace. All coated peel plies have the potential to transfer of the part. This product is used in various manufacturing processes of parts made of composite materials.

TECHNICAL DATA	VALUE
Material type	Nylon (Polyamide)
Color	Light blue/ light green
Surface weight	62 g/m ²
Maximum use temperature*	232°C

SIZE	
Thickness	100 µm
Width	1520 mm
Length	100 m

STORAGE

Shelf life: unlimited.
Storage conditions: it is recommended to store at temperatures between +10°C and +30°C in original packing

NOTES

Other width or special sizes available on request. Other colors available on request.
* Maximum use temperature should be determined in actual process conditions. The maximum use temperature depends on the duration at maximum temperature and is process specific, we recommend testing prior to use.
